DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 3-6 is withdrawn in view of the newly discovered reference to Imai (US 6,317,502). Rejections based on the newly cited reference follow.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin et al. (US 6,088,461, hereinafter "Lin") in view Imai (US 6,317,502).

Lin discloses a level adjustment circuit (dynamic volume control system) comprising:

a digital level adjustment circuit (digital volume attenuator 420);

D/A converters (DAC 806, 808, 810; Figure 12); and

analog level adjustment circuit (analog volume attenuator 424);

level adjustment is performed by said analog level adjustment circuit when a volume signal indicates a high level (col. 6, lines 14-17);

level adjustment is performed by said digital adjustment circuit when the volume level indicates a low level (col. 6, lines 18-22).

Lin differs from claims 3-6 in that it does not specify adjusting in small steps by the digital level adjustment circuit and adjusting in large steps by the analog level adjustment circuit. However, Imai, from the same field of endeavor, teaches the desirability of adjusting the volume in finer steps when the attenuation is low in order to provide a more natural effect in the volume change (col. 3, lines 1-34; col. 5, line 55 - col. 6, line 32). It would have been obvious to an artisan of ordinary skill to incorporate such varied attenuation, as taught by Imai, within the system of Lin in order to provide a smoother, more natural, volume control output.
